

FIROOZEH DAEIZADEH

BACKEND DEVELOPER

Kerman, Iran · Open to remote +98 939 031 5707 firoozedaeizadeh@gmail.com github.com/fdaei

linkedin.com/in/firoozeh-daeizadeh

Backend developer with 4+ years shipping and maintaining production services for health and e-commerce products. I build microservices in Go and TypeScript, split them along domain boundaries, and connect them with gRPC and message queues. I like owning a service end to end – schema, API, messaging, deploy – and I keep what I build observable enough to debug it at 2am.

EXPERIENCE

Backend Developer · Wenex

07/2025 – Present · Remote

- Build TypeScript/NestJS microservices for the Wenex platform, exposing the same domains over REST, GraphQL and gRPC.
- Ship services for [Behayand](#), an AI-assisted health platform, integrating object storage and NoSQL data stores.
- Wire inter-service communication over NATS and Kafka, and instrument traces and metrics so failures are traceable across services.

Backend Developer · Gocast

12/2024 – 07/2025 · Remote

- Built the Remenu platform's Go microservices with Domain-Driven Design and Clean Architecture, keeping domain logic independent of transport and storage.
- Used RabbitMQ for asynchronous workflows and gRPC with Protocol Buffers for synchronous service-to-service calls.
- Added OpenTelemetry tracing and Prometheus metrics, giving the team visibility into latency and error paths per service.

Backend Developer · Mobit

01/2022 – 12/2024 · Kerman

- Maintained and extended a live consumer e-commerce platform, taking ownership of reliability, query performance and bug triage in production.
- Built an internal BI dashboard (Yii2, MySQL) that gave business teams direct access to sales and inventory reporting.
- Integrated fintech providers (Faraboom, FinoTech) and SMS gateways, and documented the REST APIs with Swagger for client teams.

Backend Developer · Avapardaz

02/2022 – 08/2022 · Kerman

- Developed the Avinox backend in PHP (Yii2) with OAuth2 authentication, and refactored MySQL schemas and indexes for heavier read traffic.

Junior Developer · Forough Gostar

07/2020 – 02/2021 · Kerman

- Started as an intern and moved into a junior role, delivering Laravel + Livewire applications on MySQL.

TECHNICAL SKILLS

LANGUAGES

Go, TypeScript, PHP, SQL

FRAMEWORKS

NestJS, Laravel, Livewire, Yii2, Cobra, GORM

ARCHITECTURE

Microservices, Domain-Driven Design, Clean Architecture, distributed systems, REST / GraphQL / gRPC

MESSAGING

NATS, Kafka, RabbitMQ, Protocol Buffers

DATA

PostgreSQL, MySQL, MongoDB, Redis

PLATFORM

Docker, Linux, Git, OpenTelemetry, Prometheus, Swagger

WAYS OF WORKING

Scrum, remote async collaboration, code review, English (professional working proficiency)

EDUCATION

B.Sc. Computer Engineering · Shahid Bahonar University of Kerman

2018 – 2022
